

# Could your ATM network benefit from automated end-to-end testing?

## Creating value for customers

Consider the time and staff resources required to deploy new applications and manually test your entire network. Investments in automated testing for ATM networks have been known to show a **return on investment in less than a year**.

Our **ATM Channel Development Suite** automates the end-to-end testing of ATM networks in accordance with industry standards and helps to rapidly deploy new functionality to deliver advanced customer services.

### ATM TrueTest

Provides an independent and flexible graphical based desktop based testing environment for any Windows-based **open standards (XFS)** compatible ATM application.

### ATM Developer

Provides a comprehensive configuration file management solution for **NDC/912** based ATM networks, including updating screen presentation and state table information using a simple graphical interface.
